DETAILED ACTION

Claim Objections

Claim 7 is objected to because of the following informalities: line 3, "if viewed" should be --when viewed-- for clarity. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The recitation of the second electrode surrounding the first electrode is unclear and indefinite because in cross sectional view as shown in Figure 1, the second electrode 28 is formed far below the first electrode 38 and not surrounding at least the sidewalls of the first electrode 38. Only viewing from a direction perpendicular to the substrate, the second electrode 28 appears to surround the first electrode 38 as shown in Figure 2.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 5-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Song et al. (US 2002/0047128 A1).

Song et al. disclose a nitride semiconductor light emitting diode (Figure 4b) comprising a substrate 21; a nitride semiconductor formed on the substrate; the semiconductor being thick at a central portion R1 thereof and thin at a peripheral portion R2 thereof, and having an active layer 24 being formed in the thick central portion thereof; a first electrode 27 being formed in an upper face of the thick central portion; a second electrode 28 being formed in an upper face of the thin peripheral portion.

Regarding claim 6, the second electrode 28 surrounds the first electrode 27 when viewed from a direction perpendicular to the substrate (Figure 5c).

Regarding claim 7, a center of the first electrode 27 and a center of the second electrode 28 are positioned such that one is above the other when viewed from a direction perpendicular to the substrate (Figure 5c).

Regarding claim 8, the profile of the first electrode 27 forms a smooth continuum and contains no corners (Figure 5c).

Allowable Subject Matter

Claims 1-4 are allowed.

Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: prior art references do not teach or render obvious a light emitting diode comprising a reflecting mirror separated by a distance as claimed in claim 1, claim 4 and claim 9 from a center of the active layer.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Reference B is being cited since it shows a reflecting contact separated by a distance from a light-emitting region.
